AAKASH GUDDU CHAUHAN

QA Engineer Fresher — Manual Testing | Automation Testing Knowledge
Mumbai, Maharashtra | +91 9370974515 | aakash.02cx@gmail.com | github.com/Aakash02s

PROFESSIONAL SUMMARY

QA Engineer Fresher with hands-on project experience in Manual Testing of mobile and web applications. Skilled in test case design and execution, functional, regression, smoke, sanity, and UI/UX testing, along with defect identification, reporting, and retesting. Familiar with STLC, SDLC, SQL, Core Java, Selenium WebDriver, and TestNG, with a strong foundation in software quality assurance.

TECHNICAL SKILLS

Manual Testing & QA: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, UI Testing, UI/UX Testing, Usability Testing, Mobile Application Testing, Cross-Browser Testing, Black Box Testing

Test Design & Execution: Test Scenario Creation, Test Case Design, Test Case Execution, Test Planning, STLC, SDLC, Boundary Value Analysis, Equivalence Partitioning, Retesting

Defect Management: Defect Reporting, Defect Life Cycle Management, Severity & Priority Classification, MS Excel, JIRA (Basic Knowledge)

Automation Testing (Supporting Skill): Selenium WebDriver, Core Java, TestNG, Maven, Page Object Model (POM), XPath

API & Database: SQL, Postman,Request/Response Validation, Assertions

Web Technologies: HTML, CSS

Tools & Methodologies: Git, GitHub, Agile, Scrum, Jenkins, Docker, Android Studio, Visual Studio Code, SQL Workbench

PROJECTS

Mobile Application Testing — Edukanta App | *Academic Project, 2025*

- Executed manual testing across the STLC for Edukanta, a social-content mobile app (post viewing, like/unlike, comment, share, navigation), designing and running 50+ test cases covering functional, regression, smoke, sanity, and UI/UX scenarios.
- Applied black box testing techniques to validate app behavior against functional requirements for content viewing, engagement actions, and navigation flows.
- Tested UI/UX consistency and functional stability across multiple Android devices; identified and logged 15+ defects with severity and priority classification.
- Documented and tracked defects in Excel, recording defect description, steps to reproduce, expected vs. actual results, severity, priority, and status.
- Retested resolved defects and performed regression testing to confirm fixes did not introduce new issues.

Multimodal Face Spoof Detection & Liveness Verification System | *Academic Deep Learning Project, 2025–2026*

- Designed and executed test cases for a deep learning-based multimodal face spoof detection system, validating real vs. fake facial input scenarios.
- Tested liveness detection workflows and authentication scenarios, including edge cases involving spoofed image and video attacks.
- Performed functional and model validation testing; logged defects, tracked fixes, and re-executed regression cycles across multiple builds.
- Wrote assertions to validate model output responses and edge-case behavior during test execution.
- Followed an Agile-style sprint workflow for task and defect tracking, using Git for version control and collaborative code management.

Business Website Development & Testing — Shree Laxmi Welding Works | *Freelance / Academic Project, 2024*

- Performed UI testing, usability testing, and cross-browser compatibility testing on a live business website prior to production deployment.
- Validated layout, navigation, and responsiveness across browsers; identified and reported UI bugs using structured defect reporting.
- Supported pre-launch quality validation, contributing to a consistent, professional user experience on the deployed site.

EDUCATION

Bachelor of Engineering — Information Technology, Theem College of Engineering, Mumbai University (2022–2026)

Higher Secondary Certificate (Science), Utkarsha Vidyalaya & Junior College, Palghar (2020–2022)

Secondary School Certificate, Kanchan English High School, Palghar (2019–2020)

CERTIFICATIONS / ADDITIONAL TRAINING

- Familiar with CI/CD tools: Jenkins pipeline configuration and Docker containerization for test environment setup
- Hands-on with XPath locator strategies for element identification in Selenium-based automation scripts
- GitHub version control — branching, commits, pull requests, and collaborative project management
- Familiar with test framework architecture: POM (Page Object Model), Maven project structure, TestNG XML suite configuration
